How Many Times Do We Have to Save the Planet?!

UN in 2019: We must change food production to save the world, says leaked report - Cutting carbon from transport and energy 'not enough' IPCC finds

Cutting carbon from transport and energy 'not enough' IPCC finds

But in 2015, the UN Paris climate pact was supposed to be enough.

Al Gore in 2015 on Paris pact: "Years from now, our grandchildren will reflect on humanity's moral courage to solve the climate crisis and they will look to December 12, 2015, as the day when the community of nations finally made the decision to act."

Secretary of State John F. Kerry in 2015: "This is a tremendous victory for all of our citizens—not for any one country or bloc, but a victory for all of the planet, and for future generations."

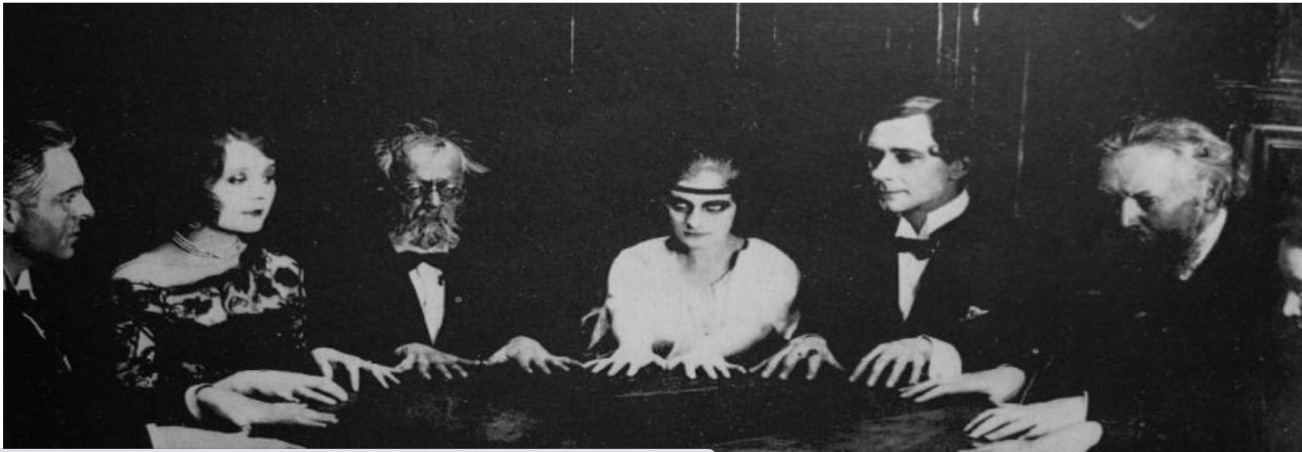

French foreign minister, Laurent Fabius in 2015: "History is coming, in fact, history is here," he said. "On 12 December 2015, we can have a historic day, a major date to go down in the history of mankind. The date can become a message of life."

Joe Manchin Just Cooked the Planet

The senator won't quit fossil fuels and is going to neuter the reconciliation bill — and we're all going to pay the price

By **JEFF GOODELL**

Sen. Joe Manchin, D-W.Va., speaks about the \$3.5 government overhaul bill, at the U.S. Capitol in Washington, Thursday, Sept. 30, 2021.

Rolling Stone: Manchin literally 'cooked the planet'

West Virginia Sen. **Joe Manchin** just cooked the planet. I don't mean that in a metaphorical sense. I mean that literally. Unless Manchin changes his negotiating position dramatically in the near future, he will be remembered as the man who, when the moment of decision came, chose to condemn virtually every living creature on Earth to a hellish future of suffering, hardship, and death.

Quite a legacy. But he has earned it.

Last night, during the insane and at times comical negotiations over President Biden's **infrastructure** bill and his \$3.5 trillion Build Back Better agenda (aka the reconciliation bill), Manchin let it be known that he was not going to vote for any measure above \$1.5 trillion. And because Democrats can't afford to lose a single vote in the Senate, if Manchin won't vote for it, the reconciliation bill won't pass.

Bill McKibben: Manchin's no vote on budget bill will alter Earth's 'geologic record'

Bill McKibben ✓
@billmckibben

He plans to gut Biden's climate plan, and with it the chances for swift global progress. This is high on the list of most consequential actions ever taken by an individual Senator; you'll be able to see the impact of this vain man in the geologic record.

nytimes.com

Key to Biden's Climate Agenda Likely to Be Cut Because of Manchin Opposition
The West Virginia Democrat told the White House he is firmly against a clean electricity program that is the muscle behind the president's plan to battle ...

Climate Morphs to COVID/Reset

MIT climate scientist Richard S. Lindzen in 2009:

“It’s hard to imagine a better leverage point than carbon dioxide to assume control over a society. It’s essential to the production of energy, it’s essential to breathing.

If you demonise it and gain control over it, you so-to-speak, control everything...So it has a kind of fundamental attractiveness to bureaucratic mentality.”

COVID/Climate Connection

They “imagined” it.

Canadian PM Trudeau confirms Great Reset: ‘This pandemic has provided an opportunity for a Reset’ – We need ‘to re-imagine economic systems’ by ‘building back better’

Canadian Prime Minister Justin Trudeau speaking to UN conference - September 29, 2020:

Trudeau: "'Building back better' means getting support to the most vulnerable while maintaining our momentum on reaching the 2030 Agenda for sustainable development and the SDGs (Sustainable Development Goals) ...

This pandemic has provided an opportunity for a Reset. This is our chance to accelerate our pre-pandemic efforts to re-imagine economic systems that actually address global challenges like extreme poverty, inequality, and climate change."

‘Shutting down the whole economy is the only way of limiting global warming to 2°C’

Yvo de Boer, former head of the UNFCCC

“The only way that a 2015 agreement can achieve a 2-degree goal is to shut down the whole global economy.”

The coronavirus' next victim? Capitalism

The pandemic has exposed how political attacks on science are the only way to maintain the capitalist order

By **MATTHEW ROZSA** PUBLISHED JUNE 7, 2020 7:30PM (EDT)

"COVID-19 has laid bare is the fragility of this massive infrastructure which we've created to artificially maintain consumption far beyond the natural carrying capacity of the planet.

And continued exploitation of fossil fuels, obviously, is inconsistent with a sustainable human society."

Schumer urges Biden to declare climate emergency

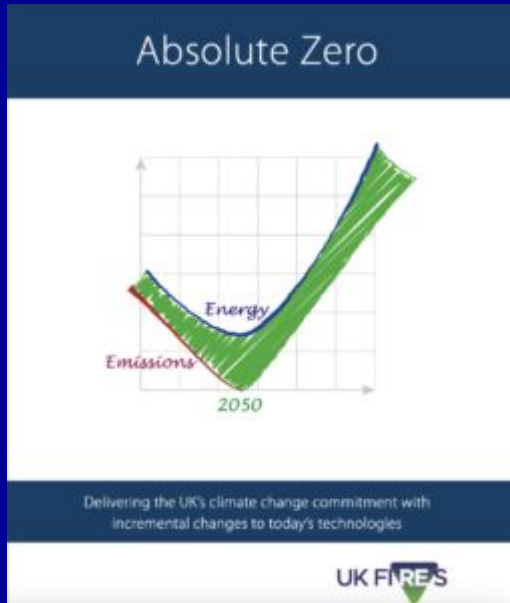

Adam Aton, E&E News reporter • Published: Tuesday, January 26, 2021

- 🚗 Highway upper speed limits reduced 100 km/h (62 mph)
- 🚗 Number of households globally without a car goes up to 35%
- 🚗 Up to 50% of car trips in cities are shifted to buses, cycling and walking
- ✈️ Business air travel does not exceed 2019 levels (both short and long-haul)
- ✈️ Long-haul leisure air travel (>6 hours) does not exceed 2019 levels
- 🌡️ Heating temperatures moderated to 19-20°C.
- 🌡️ Air conditioning temperature moderated to 24-25°C
- 🚿 Excessive hot-water temperatures reduced (no details provide on temperature)

Climate lockdowns!? 2021 International Energy Agency's 'Net-Zero' report urges 'behavioral changes' to fight climate:

'A shift away from private car use.... upper speed limits' & thermostat controls; limits on hot water!

Travelling

The impact of our travelling depends on how far we travel and how we do it. The most efficient way to travel is with a large number of people travelling in a vehicle with a small front and we can all reduce our total annual mileage.

1. Stop using aeroplanes
2. Take the train not the car when possible.
3. Use all the seats in the car or get a smaller one
4. Choose an electric car next time, if possible, which will become easier as prices fall and charging infrastructure expands.
5. Lobby for more trains, no new roads, airport closure and more renewable electricity.

UK funded 2019 report 'Absolute Zero' urged climate lockdowns: 'Stop flying...no new roads, airport closures...stop eating beef & lamb...stop doing anything that causes emissions' – Regulate CO2 similar to 'asbestos'

Abstract

Here we discuss how personal carbon allowances (PCAs) could play a role in achieving ambitious climate mitigation targets. We argue that recent advances in AI for sustainable development, together with the need for a low-carbon recovery from the COVID-19 crisis, open a new window of opportunity for PCAs. Furthermore, we present design principles based on the Sustainable Development Goals for the future adoption of PCAs. We conclude

‘Scientists’ warning on affluence’: Study: Wealth harms the planet! Solutions? ‘Degrowth’; ‘Eco-socialism’; Banning ‘oversized vehicles’; ‘Eco-feminism’; ‘Maximum income levels’

Update: Greenpeace Co-Founder Dr. Patrick Moore responds to study: "How does this garbage get published? I have never seen the forests and wild lands so lush with growth. The CO2 fertilization effect is real, 35% increase in growth, caused by affluence. Can't we teach them just one thing, that the CO2 we are putting into the atmosphere came from there in the first place? That fossil fuels were made from plants?"

Eric Worrall at WattsUpWithThat: "Central planning, rationing, price controls, punitive wealth taxes and wealth redistribution. The glorious future climate concerned scientists are planning for us."

SUMMARY

Infectious diseases prevalent in humans and animals are caused by pathogens that once emerged from other animal hosts. In addition to these established infections, new infectious diseases periodically emerge. In extreme cases they may cause pandemics such as COVID-19; in other cases, dead-end infections or smaller epidemics result. Established diseases may also re-emerge, for example by extending geographically or by becoming more transmissible or more pathogenic. Disease emergence reflects dynamic balances and imbalances, within complex globally distributed ecosystems comprising humans, animals, pathogens, and the environment. Understanding these variables is a necessary step in controlling future devastating disease emergences.

Having children is one of the most destructive things you can do the environment, say researchers

One fewer child per family can save 'average of 58.6 tonnes of CO2-equivalent emissions per year'

Caroline Mortimer | @cjmortimer | Wednesday 12 July 2017 18:21 | [comments](#)

Kids are cute but they're not really eco-friendly

One less baby helps the planet more than giving up meat, car

Caroline Mortimer

Having children is the most destructive thing a person can do to the environment, according to a new study.

Researchers from Lund University in Sweden found having one fewer child per family can save "an average of 58.6 tonnes of CO₂-equivalent emissions per year".

Eating meat, driving a car and travelling by aeroplane made up the list of the most polluting things people can do to the planet.

But having children was top, according to the new study, published in the journal *Environmental Research Letters*.

"A US family who chooses to have one fewer child would provide the same level of emissions reductions as 684 teenagers who choose to adopt comprehensive recycling for the rest of their lives," it said.

Lead author Seth Wynes told *The Local*: "We found there are four actions that could result in substantial

decreases in an individual's carbon footprint: eating a plant-based diet, avoiding air travel, living car free and having smaller families.

"For example, living car-free saves about 2.4 tonnes of CO₂ equivalent per year, while eating a plant-based diet saves 0.8 tonnes of CO₂ equivalent a year."

The paper, which studied analysed 39-peer reviewed journals studying the environmental policies of several major economies, found most governments focused on incremental changes which have "much smaller poten-

GOOD FOR THE EARTH

Activity	CO ₂ saved/yr (tonnes)
Not having babies	58.6
Avoiding trans-Atlantic flights	2.8
Living car-free	2.4
Washing clothes in cold water	0.3
Upgrading light bulbs	0.1
Eating a plant-based diet	0.8

tial to reduce emissions".

Although governments focused on increasing recycling schemes and using energy efficient light bulbs, these methods were between four and eight times less effective than eating a plant-based diet.

Researchers found that avoiding one trans-Atlantic flight per year can save between 0.7 and 2.8 tonnes of CO₂ equivalent per year (depending on the distance travelled, amount of luggage on board and how many passengers on the flight) whereas recycling will typically only save 0.21 tonnes of CO₂ equivalent per year. This means recycling is 3-13 times less likely to save the planet than avoiding that extra flight. Carbon emissions must fall to two tonnes of CO₂ per person by 2050 to avoid severe global warming, say researchers. *THE INDEPENDENT*

Introducing Climate Death tolls

"Climate change is a killer, but we don't acknowledge it on death certificates," Dr Arnagretta Hunter, from The Australian National University (ANU) Medical School, said.

"There is second component on a death certificate which allows for pre-existing conditions and other factors. - 2020

Gore's new health warning: 'Every organ system can be affected by climate change'

By: [Marc Morano](#) - [Climate Depot](#) with [0 comments](#)

July 25, 2017 11:49 AM

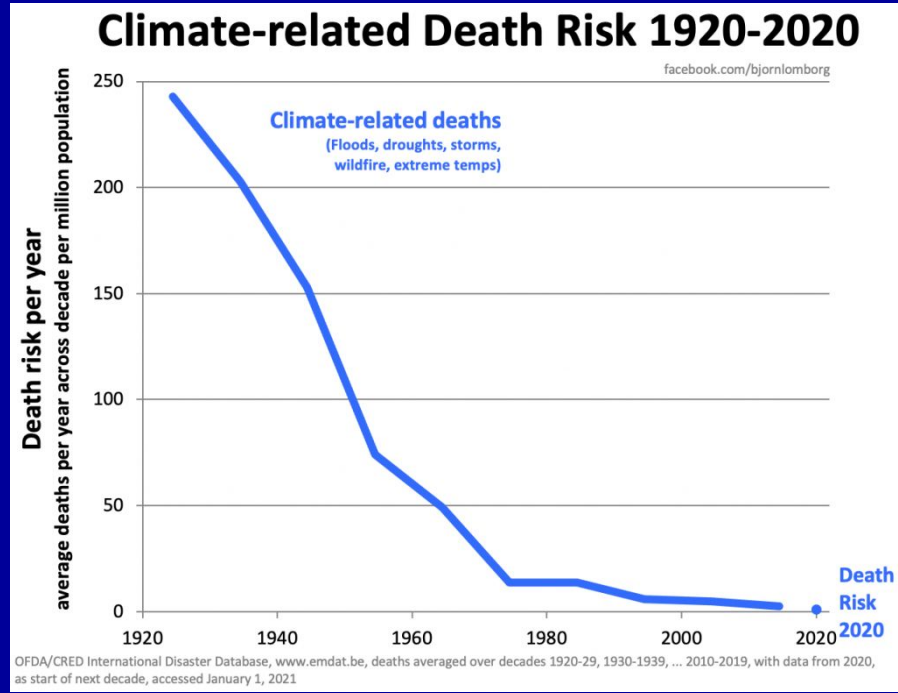

In Al Gore's new book, "An Inconvenient Sequel: Truth to Power", the former Vice President features a professor of pediatrics warning that global warming is impacting our health.

We Must follow “the science”

If you die from cancer, car accident, or organ failure --

you could be a climate death toll statistic.

The reality destroys the claims

After 100 years of climate change, 'climate-related deaths' approach zero – Dropped by over 99% since 1920 -- Meteorologist Anthony Watts

“FEAR SELLS” SAYS CNN DIRECTOR CHARLIE CHESTER

Nozanin Farrukhzoda, Writer

April 20, 2021

In Apr. 2021, Project Veritas released a 3 part video exposing technical director Charlie Chester admitting his network CNN was “creating stories” to get previous President Donald Trump out of the office.

Project Veritas, a non-profit legally recognized journalism enterprise, was created by James O’Keefe in 2011.

According to Veritas website, the enterprise “investigates, exposes corruption, dishonesty, self-dealing, waste, fraud, and other misconduct in both public and private institutions to achieve a more ethical and transparent society”.

Chester continued spilling CNN secrets, saying “I am a hundred percent going to say this and I a hundred percent believe it that if it wasn’t for CNN, I don’t know that Trump would have gotten voted out”.

According to Project Veritas, these videos were secretly recorded while Chester was on his Tinder (dating app) dates with a female Veritas journalist working undercover.

In the video, Chester states that the “Covid-19 story should be coming to an end”, and that CNN is prepared to focus on “selling” the climate change story and promote “fear”.

Chester also shared, “I was trying to do some research on the Asian hate, like the people who are getting attacked and whatnot. A bunch of black men have been attacking Asians. I’m like ‘What are you doing? Like, we [CNN] are trying to help BLM.”

The Universe is out there, waiting for you to discover it.

Questioning authority has become too much of a good thing, and it's killing people

For too many people, "Do your own research," means following a social-media post into a rabbit hole of misinformation, or even disinformation from Russians or others, observes columnist Al Cross.

Bloomberg Green

The Big Take

Global Energy Crisis Is the First of Many in the Clean-Power Era

The next several decades could see more periods of energy-driven inflation, fuel shortages and lost economic growth as electricity supplies are left vulnerable to shocks.

OPINION

THOMAS L. FRIEDMAN

A Scary Energy Winter Is Coming. Don't Blame the Greens.

“If this winter is as bad as some experts predict — with some in the poor and middle classes unable to heat their homes — I fear we’ll see a populist backlash to the whole climate/green movement. You can already smell that coming in Britain.”

NewScientist

Blame fossil fuels, not renewables, for the UK's winter energy crisis

‘Every agency is a climate agency now’ – ‘How Biden could use his whole government to take on climate change’ – Education Dept to fund teachers ‘to raise awareness of climate’

[Read the Full Article](#) 

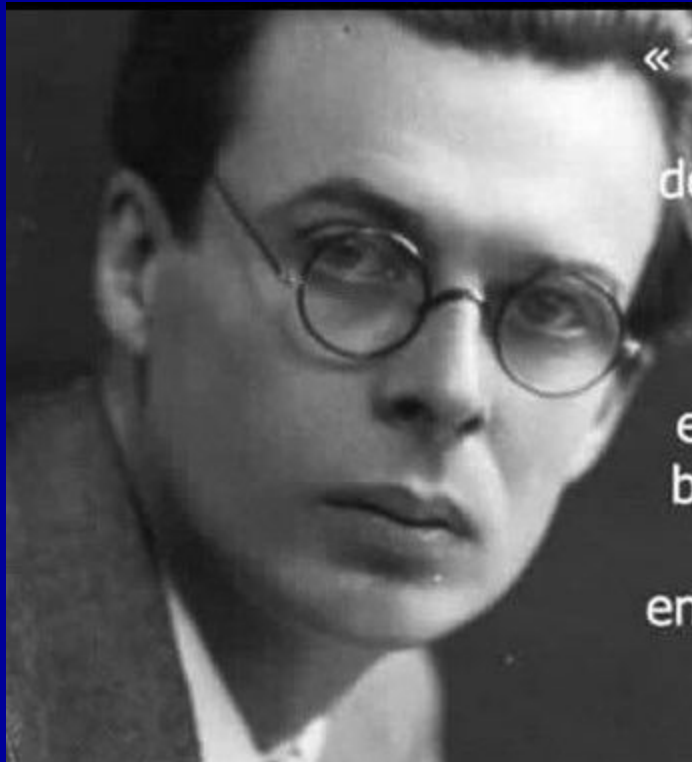

Incoming U.S. President Joe Biden has promised an “all-of-government” approach to fight climate change that would require federal agencies from the Defense Department to the Treasury to help the administration achieve its goal of sharply slashing nationwide greenhouse gas emissions. ...

"Every agency is a climate agency now," said Sam Ricketts, co-founder of Evergreen Action, an advocacy group that advised Biden's transition team on climate change. ...

Dictatorship

~~Democracy~~

« The perfect dictatorship would have the appearance of a democracy, but would basically be a prison without walls in which the prisoners would not even dream of escaping. It would essentially be a system of slavery where, through consumption and entertainment, the slaves would love their servitudes. »

Aldous Huxley 1931

It's time to say no to the one-party state!

As COVID lockdowns morph into climate lockdowns, more and more climate policy is being dictated by the administrative state, not via democratic voting.

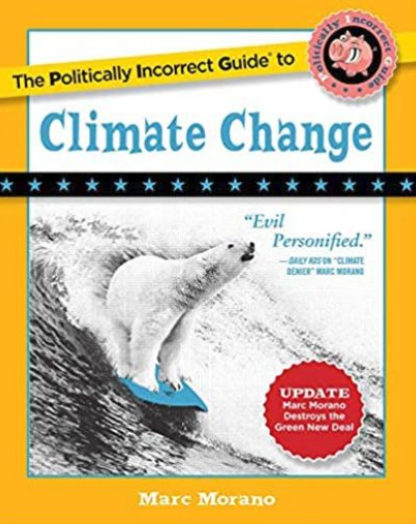

If we continue to allow unelected 'expert' bureaucrats rule our lives, it won't matter who you elect for President, Gov. Senator or Congress...
